Among the flaws fixed in the June security update are a flaw that could allow elevation of privilege on systems that don't have a firewall enabled and another that, if an attacker manages to install malicious software onto the system, can allow malware to spread and infect other systems. As with earlier security fixes, the fix addresses the MS13-090 vulnerability by leveraging Microsoft's June EMET update. Although the update is available to download from Microsoft's website, the company only recommends that users download it via the Windows Update mechanism. It is not, however, the first time Microsoft has published an EMET update as a work-around for an issue related to the MS13-090 vulnerability. Last year, the same update package was released as an EMET f678ea9f9e
